

Creating High-Resolution Screenshots for Print (MAC only)

1. Open Photoshop, select your screen shot from the desktop (**File -> Open**).
2. Change the color mode to "Index" (**Image -> Mode -> Indexed Color**)
3. Use the following settings:

4. Increase the Image Size resolution to "288", which is essentially the closest we can get to 300dpi in multiples of 72 so that the pixel data will remain proportionate. (**Image -> Image Size**).

5. Change the color mode to CMYK (**Image -> Mode -> CMYK Color**)
6. Save your document in the desired format.

That's it, you're done!
